***Information Disclosure Statement***

The information disclosure statement (IDS) submitted on 07 January 2002 contains pages 2-6 which appear to be relevant to application 09/216,324 rather than the instant application. Accordingly, the first page of the information disclosure statement has been considered by the examiner and an initialed copy of page 1 is being provided with this office action.

***Specification***

The numbering of claims is not in accordance with 37 CFR 1.126 which requires the original numbering of the claims to be preserved throughout the prosecution. When claims are canceled, the remaining claims must not be renumbered. When new claims are presented, they must be numbered consecutively beginning with the number next following the highest numbered claims previously presented (whether entered or not).

Misnumbered claims 4-11, 13-15, 17-21 and 23-24 been renumbered consecutively from 3-20.

Claim 11 (originally numbered 15) is objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim. Applicant is required to cancel the claim(s), or amend the claim(s) to place the claim(s) in proper dependent form, or rewrite the claim(s) in independent form. This claim depends upon claim 12, which was not originally filed.

### ***Double Patenting***

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-12 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-14 of copending Application No. US 2001/0029231 A1. Although the conflicting claims are not identical, they are not patentably distinct from each other because both sets of claims are identical except that impregnation of metal salts into a porous anode structure are claimed in Application No. US 2001/0029231 A1 while the claims of the instant invention are limited to impregnation of copper salts. However, both the application and the instant invention specifically include impregnating a copper salt into the porous anode structure.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Claims 13-20 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-11 of U. S. Patent No. 6,589,680 B1. Although the conflicting claims are not identical, they are not patentably distinct from each other because both encompass a solid oxide fuel cell having an anode comprising a porous YSZ layer where the pores are coated with, or include, copper.

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Virkar et al., US Patent 5,543,239 discloses impregnating porous fuel cell cathode structures with silver salts.

Pederson et al., US Patent 4,880,772 discloses forming ceramic films from aqueous solutions.

Isenberg, US Patent 3,07,433 discloses methods of forming solid oxide fuel cell electrodes.
